

# Property Market Report Victoria

#### **ABOUT THIS REPORT**

Preston Rowe Paterson prepare standard research reports covering the main markets within which we operate in each of our capital cities and major regional locations.

The markets covered in this research report include the commercial office market, industrial market, retail market, hotel and leisure market and residential market as well as economic factors impacting on the real estate markets within we operate.

We regularly undertake valuations of commercial, retail, industrial, hotel and leisure, residential and special purpose properties for many varied reasons, as set out later herein. We also provide property management services, asset and facilities management services for commercial, retail, industrial property as well as plant and machinery valuation.

To compile the research report we have considered the most recently available statistics from known sources. Given the manner in which statistics are complied and published they are usually 3-6 months out of date at the time we analyse them. Where possible we consider short term movement in the statistics by looking at daily published data in the financial press. Where this shows notable fluctuation, when compared to the formal published numbers we have commented accordingly.

#### **ECONOMIC FUNDAMENTALS**

#### **GDP**

GDP figures for the September quarter will not be available until the 7th of December, and hence we will use June's figure for the following analysis of growth in the Australian economy. A seasonally adjusted chain volume growth of 0.5% was recorded for the second quarter, and 3.3% for the twelve months to June. The quarterly figure signifies twenty-one consecutive quarters of growth for Australia, with our last recession occurring 25 years ago in 1991. In trend terms, annual growth stood at 3.1%, with the main sources of growth being Mining (0.8%), Financial and insurance services (0.5%), Public administration and safety (0.3%), Construction (0.2%) and Wholesale trade (0.2%) industries. In contrast, the largest detractor to growth was manufacturing (-0.2%).

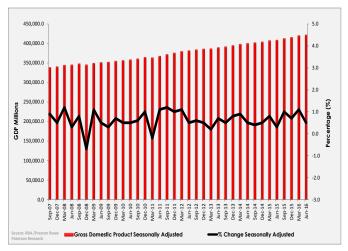

Chart 19 - Gross Domestic Product (GDP) - Source ABS

#### **Interest Rate Movements**

Following the Reserve Bank of Australia's monthly meeting, the Board kept interest rates unchanged at 1.50% for October 2016. This comes at the back of the RBA's decision to cut interest rates to historic lows in August, as a result of inflation declining to its lowest level since 1999, in conjunction with slower than average growth in the world economy. The decision to have rates unchanged for the second month in a row is backed by modest improvements in Australia's economy, with declines in the mining industry being offset by growths in residential construction, public demand and imports. Furthermore, the RBA reiterated that commodity prices had been rising over the past few months, coming off the reduction in demand from China from the previous few vears.

The twelve months to October saw the interest rate dropping 50 basis points, whilst the 10-Year government bonds and 90-Day Bill rate reducing by 71 basis points and 44 basis points

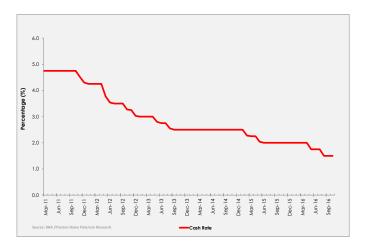

Chart 20 - Cash Rate - Source RBA

#### CPI

Figures from the Australian Bureau of Statistics indicate that headline inflation in the third quarter of 2016 grew by 0.7%, with year-on-year growth at 1.3%. These figures show strong improvements in inflation from the last quarter, which only increased by 0.4% over the quarter and 1.0% over the year to June. However, when we look at underlying inflation for September, which measure inflationary pressures from only the change in market forces, a quarterly rise of 0.35% and yearly change of 1.5% were recorded.

The largest contributors to the hike in prices stemmed from Fruit (19.5%), Vegetables (5.9%), Electricity (5.4%) and Property rates (4.0%). In contrast to this, Index figures for Fuel and Telecommunications both declined over the quarter, by -2.9% and -2.5% respectively.

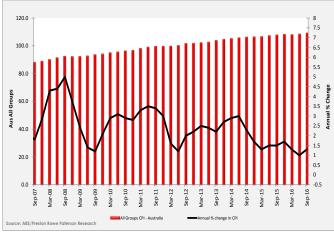

Chart 21- Consumer Price Index—Source—ABS

# 10 Year Bond & 90 Day Bill Rate

Over the month to September, Australia's 10-Year Government Bonds rate increased by 11 basis points to 1.99%. This rate however, reflects a 0.14% (0.71%) decrease from three (twelve) months prior. The 90-Day Bill rate decreased by 0.02% over the month to 1.73%. This rate also reflects a decrease of 0.26% (0.44%) from the previous three (twelve) months. The monthly changes in the 10-Year bonds rate and the 90-Day bill rate reflect a yield spread of 2 basis points.

The 10-Year government bond rate reached an all-time low of 1.82% at the start of August, following drops in yields in the US and major European countries like Britain and Germany during that time. However, upward movements have been recorded ever since as the Australian bond market continue to mirror changes occurring in the US's bond market, reaching 34 basis points higher than its lowest, to a high 2.17% at one stage.

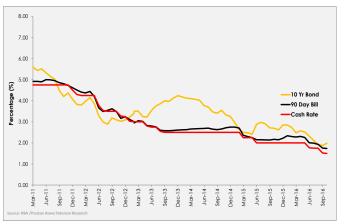

Chart 22 - 90 Day Bill, 10 year bond and cash rate - MONTHLY - Source RBA

#### **Consumer Sentiment**

September of 2016 has seen positive gains in consumer sentiment, in which the Westpac Melbourne Institute of Consumer Sentiment increased by 0.4% to 101.4 over the month. However, when compared to three months prior, consumer sentiment had decreased by 0.8%, from June's index of 102.2.

Westpac's Chief Economist, Bill Evans, stated that the index has remained relatively stable over the six months to September, despite the many economic events occurring during that time. Notably, two interest rate cuts (May and August), the Federal Election and Federal Budget, as well as major political changes occurring offshore (Brexit and the US Elections) have all occurred during this time. However, considering these outside forces, we have not experienced any drastic changes in consumers sentiment.

Chart 23- Consumer Sentiment Index - Source - Westpac—Melbourne Institute Survey

#### Labour force

Unemployment rate fell 0.1 percentage point to 5.6% in September, with total number of people with jobs falling by 9,800 (seasonally adjusted) in the month. Furthermore, full time employment reduced by 53,000 persons, and notably, parttime employment increased by 43,200 persons. When we look seasonally adjusted figures for states and territories, New South Wales and Tasmania were the only states to record an increase in employment over the month.

Over the month of September, Victoria experienced a decline in seasonally adjusted employment by 12,766 persons to 3.057 million. The unemployment rate in Victoria remained unchanged at 5.7% for September. Furthermore, Victoria's participation rate experienced a slight increase of 0.1% from the previous month to reach 59.0%.
